You: “Make laas-copy a ClaudeCodeBot plugin”
ClaudeCodeBot asks: let the Maintainer read this folder?
approved
Maintainer reads the source project, finds the reusable core (web-laas-engine)
Write the plugin: package.json, web part, settings, tests
ClaudeCodeBot --check-plugin: format, build, tests, one offline load
Failed: the manager fixes it again
passed
commit → ClaudeCodeBot hot-reloads type ;a in the composer to get \alpha
